Dream11 | Forward Deployed Engineer Internship

Assignment Submission: MatchPulse AI • Candidate: Ayush Khaitan

Candidate Name:	Ayush Khaitan
Email:	ayushkhaitan2004@gmail.com
Live Working Artifact:	https://ayushkhaitan1.github.io/MatchPulse-AI/
GitHub Repository:	https://github.com/AyushKhaitan1/MatchPulse-AI

■ Required Short Note (174 Words / Maximum 200 Words)

What fan problem are you solving?
During live matches, millions of sports and fantasy fans tune in midway or between overs. Standard broadcast apps bombard them with passive, fragmented data (raw scorecards, dry text commentary) without answering the single biggest question fans actually care about: *"Why did the game just swing, and what tactical decision created this moment?"* Furthermore, fantasy managers experience severe anxiety tracking how sudden in-match events impact their contest ranks.

How does your solution help?
MatchPulse AI acts as a real-time tactical companion delivering:
1. **"Catch Me Up in 30 Seconds"**: An instant executive recap of recent momentum shifts, tactical battles, and win probabilities for fans joining late.
2. **Turning-Point Radar**: Interactive win-probability curves revealing the exact strategic rationale behind critical deliveries.
3. **PulseBot**: A contextual conversational analyst answering real-time captaincy questions.
4. **Counterfactual "What-If" Simulator**: Allowing fans to simulate alternate bowling/batting tactics.
5. **Dream11 Fantasy Volatility Meter**: Live tracking of captaincy rank impact.

Which AI tools did you use?
Google Gemini 1.5 Flash API for context-augmented tactical sports reasoning, custom client-side heuristics inference engine, and predictive win-probability state modeling.

■ Core Artifact Features & Architecture

Feature	Fan Problem Solved	Technology Used
■ **Catch Me Up (30s)**	Eliminates confusion when tuning in mid-game with an instant 4-bullet executive breakdown.	Contextual AI synthesis
■ **Turning-Point Radar**	Explains the strategic cause behind sudden swings (e.g., Hardik wide cutter to Klaasen).	Interactive SVG probability curve
■ **PulseBot Q&A;**	Answers complex tactical questions (death-over bowler preservation, boundary tactics).	Gemini Flash + Domain heuristics
■ **What-If Simulator**	Allows fans to test counterfactual captaincy decisions and view win-rate deltas.	Probabilistic simulation engine
■ **Fantasy Tracker**	Connects real-time match events to fantasy leaderboard rank volatility.	Live Dream11 point model

How to Run Locally: git clone https://github.com/AyushKhaitan1/MatchPulse-AI && npm install && npm run dev
